Cardpresso

Pe2M
Performance to Market

Cardpresso is a dongle-based multifunctional plastic card design software with easy and flexible options, to create and to print card designs. It works for small applications as well as for complex card productions. The software is easy to install and offers all functions in a clear and intuitive user interface.

From version XS on, Cardpresso offers the integration of databases. Depending on the version, there is a multitude of database solutions.

Cardpresso supports all Windows drivers as well as Mac OS from version 10.5 on.

The different Cardpresso versions offer a large number of different functions for a professional card production.

Magnetic encoding can be processed as well as chip encoding. Additional functions include contactless RFID encoding, printing and encoding of biometric data, barcodes, and many more. The live mode and the Twain interface offer the import of all standard graphic files.
Cardpresso also offers many useful tools for the processing of the card layout.

All these functions help you to get your card design done quickly and easily.
