

## Specifications print data for RecyclePass XXL cards

Create your layout incl. bleed according to the sketch below.

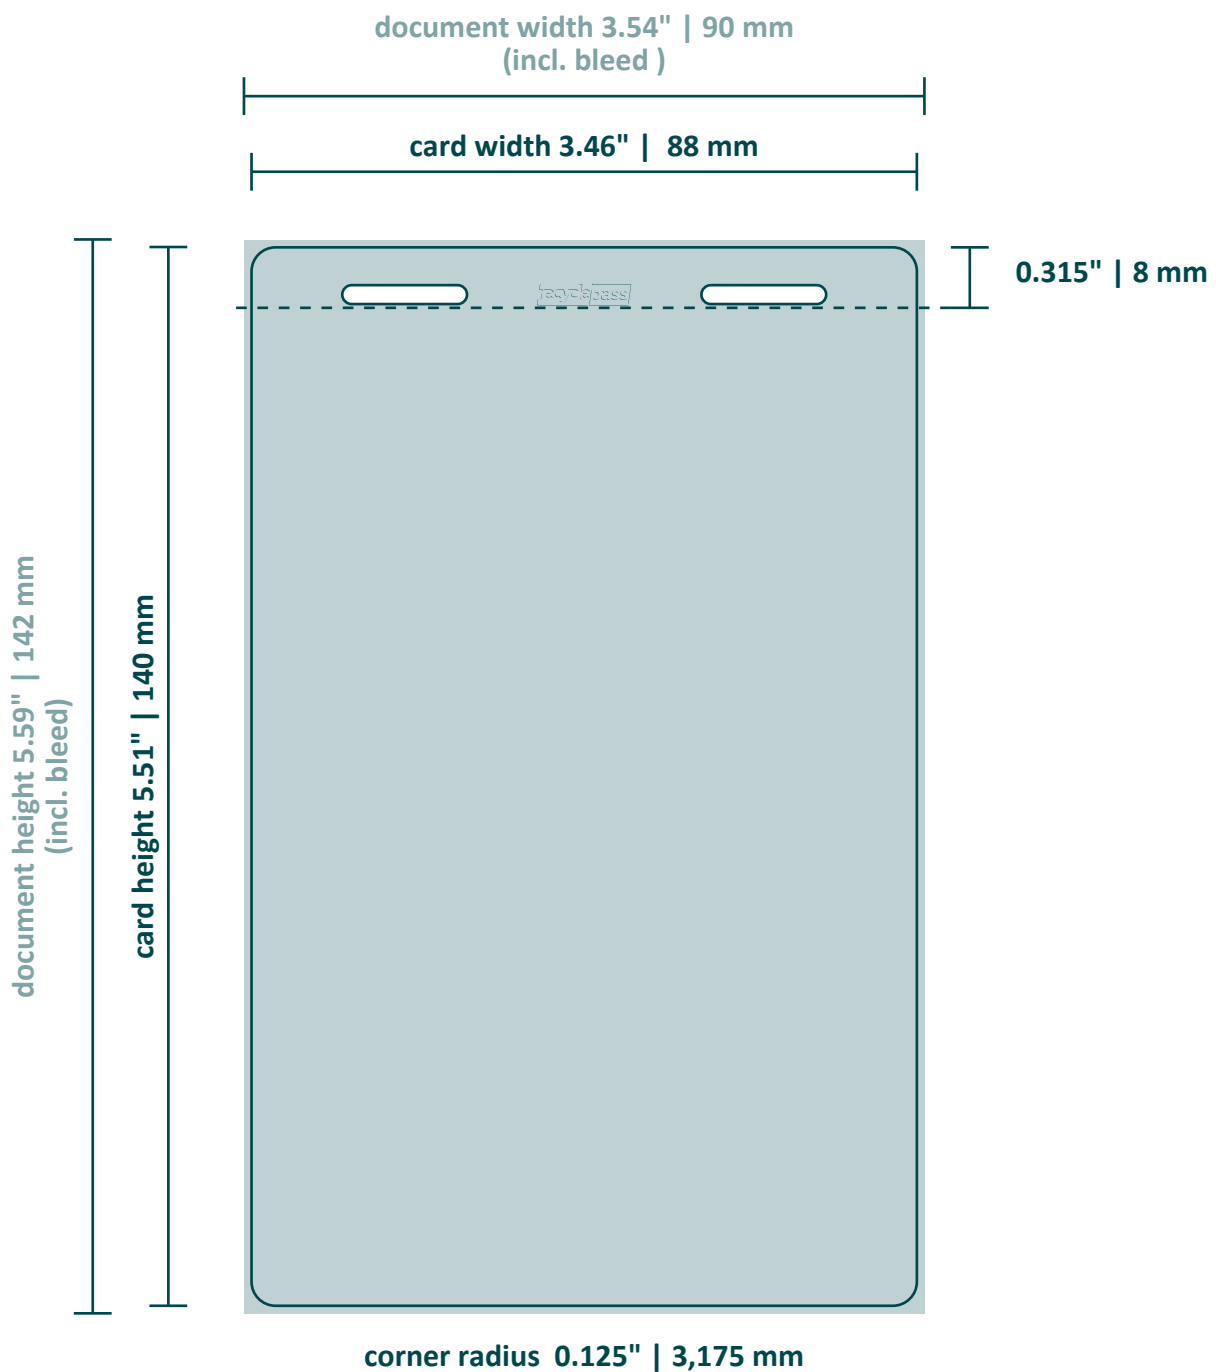

RecyclePass XXL cards have two slots at the top (i.e. for the usage with lanyards) and an embossed logo. This area should not contain any important information.

Be sure to keep the colors of all elements and images in RGB mode.

The resolution of the images must be at 300 dpi.

Finally, convert all fonts to paths.

Save your layout as a PDF file in the standard PDF/X-3:2000.

## Possible positions and design of the personalisation area

A defined area must be left unprinted (white) for the personalization of the preprinted cards. The individual information (e.g. portrait, name, number, etc.) is subsequently personalized in this area with a 2XL+ card printer. The print area of the card printer is 54 x 86 mm (2,13 x 3,38") and can be in three different positions (see sketch below).

Position 1

Position 2

Position 3

When designing the personalization area and the actual personalization elements, a gap of at least 3 mm (0,12") on the right and the left and at least 1 mm (0,04") on the top and the bottom between the preprinted area and the personalization area must be maintained for technical reasons. The white space must be 60 x 88 mm (2,36 x 3,47").

A white frame will remain between the preprinted and the personalized area.
